revogene®

SARS-CoV-2

Validation of this test has not been reviewed by FDA. Review under the EUA program is pending.

Improve your laboratory's COVID-19 testing capacity for an uncompromised standard of care

CDC guidance states: Prepare for broad-based viral testing in facilities after known or suspected SARS-CoV-2 exposure or when there is moderate to substantial transmission in the community [1]

The Revogene® platform provides healthcare systems with a reliable solution that delivers near-patient testing.

- Deliver actionable results quickly with Revogene®
- Revogene® enables physicians to make informed decisions about appropriate therapeutic and infection control strategies
- Offer on-demand or batch testing that can easily be integrated into your laboratory

The Revogene® SARS-CoV-2 assay detects the nucleic acid of SARS-CoV-2 virus, the causative agent of COVID-19.

- What are your biggest challenges with COVID-19 testing?
- What impact would a 2-step molecular test to detect the nucleic acid of the SARS-CoV-2 virus have on your lab's ability to fulfill COVID-19 testing needs?

revogene®

SARS-CoV-2

Revogene® Can Optimize Testing Capacity

- The Revogene® platform enables you to provide molecular testing throughout the health system
- Meet your increased testing demand with batch or STAT testing with Revogene®

Improve Efficiency, Deliver Standardization

- Near patient testing with Revogene® provides a rapid turnaround time which optimizes patient management by providing an earlier diagnosis for improved patient outcomes
- Revogene® can help infections from being transmitted to others through rapid execution of infection prevention strategies
- Revogene® provides clinicians with actionable results for faster treatment decisions

Trusted Partner

- Revogene® is a flexible molecular platform that can help standardize testing throughout your health system

Revogene® SARS-CoV-2 Procedure Steps

Sample to Result in 2 Steps
Less than 1 minute hands on time

Specimen

1 Load sample into the PIE

2 Place PIE into instrument and start

Product Specifications

Intended Use

The Revogene® SARS-CoV-2 assay is a real-time Reverse Transcription Polymerase Chain Reaction (rRT-PCR) test run on the Revogene® instrument for the qualitative detection of nucleic acid from SARS-CoV-2 in nasopharyngeal swab (NPS) specimens collected from individuals suspected of having a COVID-19 infection.

Turnaround Time

< 85 minutes, with as early as 47 minutes for positive specimens with EPro - early call feature

Sample Type

Nasopharyngeal swab in transport media

Kit Storage

2-25 C

Performance

92.9% PPA **99.0%** NPA

Catalog Number

Revogene® SARS-CoV-2 — 410700

Test Kit Size

24 tests per kit

Validation of this test has not been reviewed by FDA. Review under the EUA program is pending.
