

For the detection of Group B *Streptococcus* (GBS) DNA from vaginal/rectal swabs.  
For use with the Revogene® instrument.  
Please refer to the current complete instructions for proper external controls testing and results interpretation.

## TEST PROCEDURE

### How to perform the test

1.

- Break the vaginal/rectal swab into the Sample Buffer Tube (SBT).
- Vortex the SBT at high speed for 30 seconds.
- Unseal the pouch containing the Revogene® GBS DS PIE.

2.

- Using the Disposable Transfer Tool (DTT), aspirate the Sample Buffer (SB) by squeezing the entire bulb until the liquid level is anywhere between the two lines on the DTT.
- Discharge the specimen completely into the Sample Loading Chamber of the PIE.
- Close the cap of the Sample Loading Chamber tightly.

3.

- Start the test run by navigating to the <Setup Run> menu. Select Revogene® GBS DS. Follow the onscreen instructions to load the patient test PIE.
- Load the remaining patient tests. If less than eight (8) PIEs are being tested, load MOCK PIEs in the carousel in the remaining positions.
- Scan the retention ring and place it on the carousel.

4.

- Close the instrument lid with both hands and ensure the lid lock engages.
- Select <Start> to initiate the test and walk away.
- The lid opens when the run is complete.
- Remove all PIEs including MOCK PIEs after the run.
- Tap the <Results> icon to see test results.

**Note:** The E-PRO feature may display positive results as early as 40 minutes.
