

Fast qPCR Mix

For research or further manufacturing use only

Catalog No:	MDX020
Lot No:	EM024-B123390
Storage Conditions:	-20°C
Component Lot No:	SFPN-223212A
Expiry date:	January 2026

Quality Control Parameters

Fast qPCR Mix is suitable for fast high-multiplex qPCR assays

Analysis	Specification	Result
Functional	Quantitative PCR analysis amplifying 6 genes from a dilution series of mouse cDNA under standard conditions. Cq profiles must be consistent for the test and reference sample with ± 0.5 Cq variance.	Passed
DNA contamination	Quantitative PCR analysis with no template. Presence of <i>E. coli</i> and mouse genomic DNA checked. Test sample must amplify in line with control sample.	Passed
DNase contamination	Incubation of a 1Kb double stranded DNA fragment. Incubation for 4 hours at 37°C with dilution series of DNase I. Analysed by agarose gel electrophoresis. Test sample must show less degradation than the limit of detection 2.5 x 10 ⁻³ U DNase I.	Passed
