

Air-Dryable™ Direct DNA qPCR Urine, 4x

For research or further manufacturing use only

Catalog No:	MDX150
Lot No:	B122420
Storage Conditions:	-20°C
Component Lot No:	323111A
Expiry date:	December 2025

Quality Control Parameters

Analysis	Specification	Result
Functional	<p>Quantitative real-time PCR analysis amplifying a target gene from dilutions of mouse cDNA under standard cycling conditions.</p> <p><u>Pass Criteria:</u></p> <p>Amplification profile of a 1:10 dilution must be consistent for the test and reference sample within ≤ 1.0 Cq difference.</p> <p>The end florescence of the 1:10 dilution must be consistent for the test and reference sample within ≤ 0.10 difference.</p>	Passed
DNA contamination	<p>Quantitative PCR analysis with no template. Presence of <i>E. coli</i> and mouse genomic DNA checked. Test sample must amplify in concordance with control sample.</p> <p><u>Pass Criteria:</u></p> <p>Amplification traces must overlay with the negative control.</p>	Passed
DNase contamination	<p>Incubation of a 1Kb double stranded DNA fragment. Incubation for 4 hours at 37°C with dilution series of DNase I. Analysed by agarose gel electrophoresis. Test sample must show less degradation than the limit of detection 2.5×10^{-3} U DNase.</p> <p><u>Pass Criteria:</u></p> <p>No detectable degradation.</p>	Passed
